

MARINE ALIGNMENT

LPG CARRIERS

Easeacon is a strong player in loading computers for the LPG carrier market, and is the preferred brand with more ship owners.

Whether you own or operate LPG or LNG carriers, Easeacon will reflect the way the vessels are best operated - your way.

Easeacon interfaces to tank monitoring, draught measuring and communication systems, expanding the concept of the standard of a loading computer.

Optimize, save and be safe. The integrated AutoBallast and OptiTrim modules help you to depart with the most optimal ballast condition and trim, and therefore reduce fuel consumption.

For LPG/LNG carriers, extensive reporting tool requirements are imminent, and with the Easeacon tailor-making, we provide the vital information tools you need on a daily basis.

Easeacon is the natural information centre. All reporting is done by use of emails, and extensive printing and faxing facilities are at hand.

Report the "Estimated Time of Completion" directly to the relevant party even before loading has begun.

Intermediate and final condition statements form part of the information and reporting portfolio in Easeacon.

It is our mission to provide accurate and adequate support whenever you need it and wherever you are. Our quick response time ensures that you have quality assistance only a phone call away.

Developed with our customers world-wide, Easeacon is made in Denmark.
