

MARINE ALIGNMENT

CONTAINER SHIPS

With Easeacon you get a sophisticated and high-quality planning tool for your fleet or single vessel. Easeacon accommodates all vessel particulars and is highly tailor-made to suit your specific needs.

Container planning is easy with extensive EDI, tracking facilities, container summaries and IMDG database which allows Easeacon to accurately assess any cargo situation, allowing even last-minute decision-making. The incorporated stack weight control and lashing calculation systems give you instant validation of the operations planned.

Let Easeacon handle the container information transmitted between ships, shore planning centres (BAPLIE) and container terminals (MOVINS). With an Easeacon license, each vessel may be pre-planned from any of your offices.

Optimize, save and be safe. The bridge visibility check module helps you optimize cargo intake. The integrated AutoBallast and OptiTrim modules help you to reduce fuel consumption, and with the IncliningTest module, Easeacon is able to accurately assess the optimum and safe sailing condition.

The interface option to equipment control, tank monitoring, draught measuring and communication systems enhance the utility of Easeacon and expands the concept of a standard loading instrument.

Marine Alignment is member of the UN body "SMDG User Group for Shipping Lines and Container Terminals" setting the standards for the UN/EDIFACT EDI messages for the Maritime Industry.

It is our mission to provide accurate and adequate support whenever you need it and wherever you are. Our quick response time ensures that you have quality assistance only a phone call away.

Developed with our customers world-wide, Easeacon is made in Denmark.
